Expression of Interest (Own)

Sample Project Listing #1

Expression of Interest:

Hey Joe- Happy to help with making your application – looks like you need to convert PSD mockup files convert into custom code using HTML, CSS, and JavaScript to reach your patients across it.

I can develop it in the react.js library because React JS was designed to provide high performance in mind, it is known to be SEO Friendly, has Performance Enhancement, Excellent cross-platform support, and provides amazing developer tools.

My name is Ahmed, a full-stack web developer with 2 years of experience with 20+ clients.

I think by developing this web application, we can:

1-offer powerful tools for efficient work and better care delivery. Using web browsers, medical practitioners can reach their patients, access patient medical data, and effectively collaborate with other medical practitioners.

2-meet compliance requirements, all patient health information must be protected when stored on computer systems or transmitted over the Internet, or other computer networks. In the healthcare web applications that we build, all sensitive data is encrypted, stored, and transferred to authorized users through a secure channel. Only secure connection via HTTPS is used for all connections between the app and servers to ensure the privacy and integrity of transmitted data.

I look forward to hearing from you soon about this opportunity and I thank you for your time and consideration in this matter.
